Computation of 2013 Alternative Minimum Tax to Determine Nebraska Minimum Tax for the 2013 Nebraska Return

Issue

How should the alternative minimum tax (AMT) computed for a taxpayer's 2013 U.S. Fiduciary Income Tax Return, Federal Form 1041, Schedule I, be recalculated to compute the Nebraska income tax?

Conclusion

The federal AMT must be recomputed using the adjustments required by [Neb. Rev. Stat. § 77-2717](#). This will facilitate the computation for items which are reflected differently in the determination of federal taxable income for Nebraska purposes. This applies to any federal schedules or other forms, the results of which are used in calculating the federal AMT.

Analysis

Among the adjustments provided by [Neb. Rev. Stat. § 77-2716](#) are the exclusion from taxable income of interest or dividends from U.S. obligations ([Fiduciary Income Tax Regulation 23-004.03A](#)) and the inclusion of interest or dividends from non-Nebraska source state or local obligations. Neb. Rev. Stat. § 77-2716 also provides for the exclusion from Nebraska taxable income of any non-Nebraska income from an S corporation or limited liability company (LLC). Therefore, any associated preference item derived from the S corporation or LLC included in the AMT calculations should be excluded to the same extent in the Nebraska computation.

The specific line entries and the required adjustments in recomputing the minimum tax for the [2013 Nebraska Fiduciary Income Tax Return, Form 1041N](#), are provided below. **Recalculate all total or computation lines to reflect adjustments made pursuant to this ruling.** All other entries must be the same as for the federal minimum tax computation.
