

2023 REPORTS AND OPINIONS OF THE PROPERTY TAX ADMINISTRATOR

BOONE COUNTY

April 7, 2023

Commissioner Keetle:

The Property Tax Administrator has compiled the 2023 Reports and Opinions of the Property Tax Administrator for Boone County pursuant to Neb. Rev. Stat. § 77-5027. This Report and Opinion will inform the Tax Equalization and Review Commission of the level of value and quality of assessment for real property in Boone County.

The information contained within the County Reports of the Appendices was provided by the county assessor pursuant to Neb. Rev. Stat. § 77-1514.

For the Tax Commissioner

Sincerely,

Ruth A. Sorensen

Property Tax Administrator

Ruth a. Sorensen

Introduction

Pursuant to Neb. Rev. Stat. § 77-5027 the Property Tax Administrator (PTA) shall annually prepare and deliver to each county assessor and to the Tax Equalization and Review Commission (Commission) the Reports and Opinions (R&O). The R&O contains statistical and narrative reports informing the Commission of the certified opinion of the PTA regarding the level of value and the quality of assessment of the classes and subclasses of real property in each county. In addition, the PTA may make nonbinding recommendations for class or subclass adjustments to be considered by the Commission.

The statistical and narrative reports in the R&O provide an analysis of the assessment process implemented by each county to reach the levels of value and quality of assessment required by Nebraska law. The PTA's opinion of the level of value and quality of assessment in each county, is a conclusion based upon all the data provided by the county assessor and information gathered by the Nebraska Department of Revenue, Property Assessment Division (Division) regarding the assessment activities in the county during the preceding year.

The statistical reports are developed using the statewide sales file that contains all transactions as required by Neb. Rev. Stat. § 77-1327. From this state sales file, a statistical analysis comparing assessments to sale prices for arm's-length sales (assessment sales ratio) is prepared. After analyzing all available information to determine that the sales represent the class or subclass of real property being measured, inferences are drawn regarding the level of assessment and quality of assessment of that class or subclass of real property. The statistical reports contained in the R&O are developed based on standards developed by the International Association of Assessing Officers (IAAO).

The analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio studies and the overall quality of assessment in the county. The assessment practices are evaluated in the county to ensure generally accepted mass appraisal techniques are used and that those methods will generally produce uniform and proportionate valuations.

The PTA considers the statistical reports and the analysis of assessment practices when forming conclusions for both the level of value and quality of assessment. The consideration of both the statistical indicators and assessment processes used to develop valuations is necessary to accurately determine the level of value and quality of assessment. Assessment practices that produce a biased sales file will generally produce a biased statistical indicator, which, on its face, would otherwise appear to be valid. Likewise, statistics produced on small, unrepresentative, or otherwise unreliable samples, may indicate issues with assessment uniformity and assessment level – however, a detailed review of the practices and valuation models may suggest otherwise. For these reasons, the detail of the PTA's analysis is presented and contained within the Residential, Commercial, and Agricultural land correlations of the R&O.

Statistical Analysis:

Before relying upon any calculated statistical measures to evaluate the assessment performance of the county assessor, the Division teammates must evaluate whether the statistical sample is both representative of the population and statistically reliable.

A statistically sufficient reliable sample of sales is one in which the features of the sample contain information necessary to compute an estimate of the population. To determine whether the sample of sales is sufficient in size to evaluate the class of real property, measures of reliability are considered, such as the coefficient of dispersion (COD) or the width of the confidence interval. Generally, the broader the qualitative measures, the more sales will be needed to have reliability in the ratio study.

A representative sample is a group of sales from a larger population of parcels, such that statistical indicators calculated from the sample can be expected to reflect the characteristics of the sold and unsold population being studied. The accuracy of statistics as estimators of the population depends on the degree to which the sample represents the population.

Since multiple factors affect whether a sample is statistically sufficient, reliable, and representative, single test thresholds cannot be used to make determinations regarding sample reliability or representativeness.

For the analysis in determining a point estimate of the level of value, the PTA considers three measures as indicators of the central tendency of assessment: the median ratio, weighted mean ratio, and mean ratio. The use and reliability of each measure is based on inherent strengths and weaknesses which are the quantity and quality of the information from which it was calculated and the defined scope of the analysis.

The median ratio is considered the most appropriate statistical measure to determine a level of value for direct equalization, which is the process of adjusting the values of classes or subclasses of property in response to an unacceptable required level of value. Since the median ratio is considered neutral in relationship to either assessed value or selling price, adjusting the class or subclass of properties based upon the median measure will not change the relationships between assessed value and level of value already present in the class of property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers, which can skew the outcome in the other measures.

The weighted mean ratio best reflects a comparison of the fully assessable valuation of a jurisdiction, by measuring the total assessed values against the total of selling prices. The weighted mean ratio can be heavily influenced by sales of large-dollar property with extreme ratios.

The mean ratio is used as a basis for other statistical calculations, such as the Price Related Differential (PRD) and Coefficient of Variation (COV). As a simple average of the ratios, the mean ratio has limited application in the analysis of the level of value because it assumes a normal

distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

The quality of assessment relies in part on statistical indicators as well. If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the mean ratio, it may be an indication of disproportionate assessments. Assessments are disproportionate when properties within a class are assessed at noticeably different levels of market value. The coefficient produced by this calculation is referred to as the PRD and measures the assessment level of lower-priced properties relative to the assessment level of higher-priced properties. The PRD range stated in IAAO standards is 98% to 103%. A perfect match in assessment level between the low-dollar properties and high-dollar properties indicates a PRD of 100%. The reason for the extended range on the high end is the recognition by IAAO of the inherent bias in assessment. The IAAO Standard on Ratio Studies notes that the PRD is sensitive to sales with higher prices even if the ratio on higher priced sales do not appear unusual relative to other sales, and that small samples, samples with high dispersion, or extreme ratios may not provide an accurate indication of assessment regressivity or progressivity, appraisal biases that occur when high-value properties are appraised higher or lower than low-value properties in relation to market values.

The Coefficient of Dispersion (COD) is a measure also used in the evaluation of assessment quality. The COD measures the average absolute deviation calculated about the median and is expressed as a percentage of the median. A COD of 15% indicates that half of the assessment ratios are expected to fall within 15% of the median. The closer the ratios are grouped around the median the more equitable the property assessments tend to be.

Nebraska law does not provide for a range of acceptability for the COD or PRD; however, the IAAO Standard on Ratio Studies establishes the following range of acceptability for the COD:

| General Property Class | Jurisdiction Size/Profile/Market Activity | COD Range |
|--|---|-------------|
| Residential improved (single family | Very large jurisdictions/densely populated/newer properties/active markets | 5.0 to 10.0 |
| dwellings, condominiums, manuf. | Large to mid-sized jurisdictions/older & newer properties/less active markets | 5.0 to 15.0 |
| housing, 2-4 family units) | Rural or small jurisdictions/older properties/depressed market areas | 5.0 to 20.0 |
| | Very large jurisdictions/densely populated/newer properties/active markets | 5.0 to 15.0 |
| Income-producing properties (commercial, industrial, apartments,) | Large to mid-sized jurisdictions/older & newer properties/less active markets | 5.0 to 20.0 |
| | Rural or small jurisdictions/older properties/depressed market areas | 5.0 to 25.0 |
| | Very large jurisdictions/rapid development/active markets | 5.0 to 15.0 |
| Residential vacant land | Large to mid-sized jurisdictions/slower development/less active markets | 5.0 to 20.0 |
| | Rural or small jurisdictions/little development/depressed markets | 5.0 to 25.0 |
| _ | Very large jurisdictions/rapid development/active markets | 5.0 to 20.0 |
| Other (non-agricultural) vacant land | Large to mid-sized jurisdictions/slower development/less active markets | 5.0 to 25.0 |
| | Rural or small jurisdictions/little development/depressed markets | 5.0 to 30.0 |

A COD under 5% indicates that the properties in the sample are either unusually homogenous, or possibly indicative of a non-representative sample due to the selective reappraisal of sold parcels. The IAAO utilizes varying upper bounds for the COD range to recognize that sample size, property type, variation of property ages and market conditions directly impact the COD. This chart and the analyses of factors impacting the COD are considered to determine whether the calculated COD is within an acceptable range. The reliability of the COD can also be directly affected by extreme ratios.

The confidence interval is another measure used to evaluate the reliability of the statistical indicators. The PTA primarily relies upon the median confidence interval, although the mean and weighted mean confidence intervals are calculated as well. While there are no formal standards regarding the acceptable width of such measure, the range established is often useful in determining the range in which the true level of value is expected to exist. Pursuant to Neb. Rev. Stat. §77-5023, the acceptable range is 69% to 75% of actual value for agricultural land, except for taxes levied to pay school bonds passed after January 12, 2022 for which the acceptable range is 44% to 50% of actual value. For all other classes of real property, the acceptable range is 92% to 100% of actual value.

Analysis of Assessment Practices:

A review of the assessment practices that ultimately affect the valuation of real property in each county is completed. This review is done to ensure the reliability of the statistical analysis and to ensure generally accepted mass appraisal techniques are used to establish uniform and proportionate valuations. The review of assessment practices is based on information provided by the county assessors in Assessment Surveys and Assessed Value Updates (AVU), along with observed assessment practices in the county.

To ensure county assessors are submitting all Real Estate Transfer Statements, required for the development of the state sales file pursuant to Neb. Rev. Stat. §77-1327, a random sample from the county registers of deeds' records is audited to confirm that the required sales have been submitted and reflect accurate information. The timeliness of the submission is also reviewed to ensure the sales file allows analysis of up-to-date information. The sales verification and qualification procedures used by the county assessors are reviewed to ensure that sales are properly considered arm's-length transactions unless determined to be otherwise through the verification process. Proper sales verification practices ensure the statistical analysis is based on an unbiased sample of sales.

Comparison of valuation changes on sold and unsold properties is conducted to ensure that there is no bias in the assessment of sold parcels and that the sales file adequately represents the population of parcels in the county.

Valuation groups and market areas are also examined to identify whether the groups and areas being measured truly represent economic areas within the county. The measurement of economic areas is the method by which the PTA ensures intra-county equalization exists. The progress of the county assessor's six-year inspection and review cycle is documented to ensure compliance with Neb. Rev. Stat. \xi 77-1311.03 and also to confirm that all property is being uniformly listed and described for valuation purposes.

Valuation methodologies developed by the county assessor are reviewed for both appraisal logic and to ensure compliance with generally accepted mass appraisal techniques. Methods and sales used to develop lot values, agricultural outbuildings, and agricultural site values are also reviewed to ensure the land component of the valuation process is based on the local market and economic area.

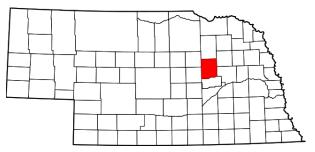

Compliance with statutory reporting requirements is also a component of the assessment practices review. Late, incomplete, or excessive errors in statutory reports can be problematic for property owners, county officials, the Division, the Commission, and others. The late, incomplete, or excessive errors in statutory reporting highlights potential issues in other areas of the assessment process. Public trust in the assessment process demands transparency, and assessment practices are reviewed to ensure taxpayers are served with such transparency.

Comprehensive review of assessment practices in each county is conducted throughout the year. When practical, if potential issues are identified, they are presented to the county assessor for clarification and correction, if necessary. The county assessor can then work to implement corrective measures prior to establishing assessed values. The PTA's conclusion that assessment quality either meets or does not meet generally accepted mass appraisal techniques is based on the totality of the assessment practices in the county.

*Further information may be found in Exhibit 94

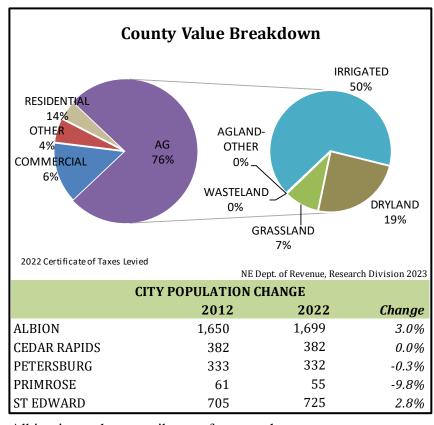

County Overview

With a total area of 687 square miles, Boone County has 5386 residents, per the Census Bureau Quick Facts for 2021, a slight decrease population decline from the 2020 U.S. Census. Reports indicate that 79% of county residents are homeowners and 88% of residents occupy the same residence as in the prior year (Census

Quick Facts). The average home value is \$123,624 (2022 Average Residential Value, Neb. Rev. Stat. § 77-3506.02).

The majority of the commercial properties in Boone County are located in and around Albion, the county seat. Per the latest information available from the U.S. Census Bureau, there are fewer employer establishments at 192, with more total employment of 1,426 people, for an overall slight decrease of 3% in employment from 2019.

Albion is another contributory factor to the economy.

The majority Boone of County's valuation base comes from agricultural land. A mix of irrigated and grass land makes up the majority of the land in the county. Boone County is included in both the Lower Loup and Lower Platte North Natural Resources Districts (NRD). When compared against the top crops of the other counties in Boone Nebraska, County ranks fifth in rye for grain. In value of sales by commodity group, Boone County ranks third in hogs and pigs (USDA AgCensus).

The ethanol plant located in

2023 Residential Correlation for Boone County

Assessment Actions

Costing tables were updated for all residential properties. After costing was applied, further adjustments were needed. Albion and St. Edward increased 18% and 19%, respectively. Rural residential houses built between 1970-1979 increased 20% and houses built between 2010-2014 increased 35%, no other changes were reported. Pick-up and general maintenance was completed for the entire residential class.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

The review of sales usability rates of the residential class indicates the rate in Boone County was equal to the state residential average rate. Review of the sales roster revealed no apparent bias in the qualification of sales.

Boone County has six valuation groups with Albion, Petersburg, Cedar Rapids and St. Edward each having their own valuation group, while the rural villages and the acreages comprise the other two. The county assessor is current on the six-year inspection and review cycle. Inspection dates range from 2019 to 2022. Boone County has land studies ranging from 2018 to 2021. Land to building ratios support that land values are current. Depreciation table dates range from 2017 thru 2022 for the residential class. Costing tables are dated 2021.

The Boone County Assessor has a written methodology on file.

Description of Analysis

The residential parcels are analyzed utilizing six valuation groups based on the assessor location.

| Valuation Group | Description |
|-----------------|----------------|
| 1 | Albion |
| 2 | Cedar Rapids |
| 3 | Petersburg |
| 5 | St. Edward |
| 6 | Acreages |
| 7 | Rural Villages |

The statistical sample for the residential class includes 121 qualified sales representing all valuation groups. The three measures of central tendency are all within the acceptable range. The

2023 Residential Correlation for Boone County

qualitative statistics are within the range recommended by IAAO. Review of the Valuation Groups shows that all with sufficient sales have medians within the acceptable range.

A review of the sold parcels compared to the change in the 2023 County Abstract of Real Property, Form 45 Compared with the 2022 Certificate of Taxes Levied Report (CTL) supports that the values were uniformly applied to the residential class of property.

Equalization and Quality of Assessment

A review of the statistics, along with all other information available, and the assessment practices suggest that assessments within the county are valued within the acceptable range, and therefore are equalized. The quality of the assessment of the residential property in Boone County complies with generally accepted mass appraisal techniques.

| VALUATION GROUP | | | | | | |
|-----------------|-------|--------|--------|----------|-------|--------|
| RANGE | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |
| 1 | 67 | 94.87 | 96.60 | 95.55 | 17.74 | 101.10 |
| 2 | 10 | 96.91 | 97.18 | 96.28 | 06.26 | 100.93 |
| 3 | 6 | 94.97 | 98.10 | 94.91 | 12.95 | 103.36 |
| 5 | 23 | 94.73 | 105.93 | 95.29 | 32.94 | 111.17 |
| 6 | 12 | 95.10 | 97.47 | 96.35 | 09.81 | 101.16 |
| 7 | 3 | 87.80 | 87.87 | 83.50 | 08.60 | 105.23 |
| ALL | 121 | 94.87 | 98.36 | 95.42 | 18.51 | 103.08 |

Level of Value

Based on analysis of all available information, the level of value for the residential property in Boone County is 95%.

2023 Commercial Correlation for Boone County

99Assessment Actions

For the commercial class a revaluation was completed on all properties by the contract appraiser. Depreciation tables were updated for all commercial properties. Pick-up and general maintenance was completed.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

The sales usability rate is below the state average commercial rate. A review of the sales roster shows about one-third are substantially changed and most of the other two-thirds are family or partial interest sales.

There are five valuation groups in Boone County. Each of the four larger towns have their own valuation group while the small villages and rural commercial are combined into the remaining valuation group. The county assessor is current on the six-year inspection and review cycle as evidenced by the complete inspection and review of the commercial class in 2022. Costing tables are dates 2019 and depreciation tables are dated 2022. A lot study was completed in 2018.

Description of Analysis

For the commercial class five valuation groups are used and are based on assessor location.

| Valuation Group | Description |
|-----------------|--------------|
| 1 | Albion |
| 2 | Cedar Rapids |
| 3 | Petersburg |
| 5 | St. Edward |
| 6 | Rural |

The statistical sample for the commercial class includes 20 qualified sales representing four of the five valuation groups. Two of the three measures of central tendency are within the acceptable range. The COD is within the acceptable range, but the PRD is high. The weighted mean and the PRD are being affected by one extreme high dollar sale. Removal of that sale would bring all three measures of central tendency and both qualitative statistics within the acceptable range. When looking at the valuation groups all medians are within the accepted range except Valuation Group 3 which only has one sale.

2023 Commercial Correlation for Boone County

A review of the sold parcels compared to the change in the 2023 County Abstract of Real Property, Form 45 Compared with the 2022 Certificate of Taxes Levied Report (CTL) supports that the values were uniformly applied to the commercial class of property.

Equalization and Quality of Assessment

A review of the statistics and the assessment practices suggest that assessments within the county are valued within the acceptable range, and therefore are equalized. The quality of the assessment of the residential property in Boone County complies with generally accepted mass appraisal techniques.

| VALUATION GROUP | | | | | | |
|-----------------|-------|--------|--------|----------|-------|--------|
| RANGE | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |
| 1 | 9 | 100.00 | 95.71 | 74.22 | 11.83 | 128.95 |
| 2 | 6 | 95.38 | 97.00 | 89.51 | 21.47 | 108.37 |
| 3 | 1 | 100.83 | 100.83 | 100.83 | 00.00 | 100.00 |
| 5 | 4 | 98.60 | 102.25 | 98.20 | 07.44 | 104.12 |
| ALL | 20 | 98.53 | 97.66 | 77.24 | 13.45 | 126.44 |

Level of Value

Based on analysis of all available information, the level of value for the commercial property in Boone County is 99%.

2023 Agricultural Correlation for Boone County

Assessment Actions

For the agricultural class, there were no physical reviews, but a land use review was conducted using aerial imagery for the whole county. In Market Area 1 irrigated land increased 1%, dryland increased less than 1% and grassland stayed the same. Market Area 2 had no changes. No changes were made to home sites, farm sites or agricultural houses and outbuildings. just pick-up work and general maintenance was completed.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

The sales verification usability rate is below the state average agricultural rate. A review of the non-qualified sales revealed the majority are substantially changed, family or partial interest sales. It was determined that all qualified sales are available for the measurement process.

The Boone County Assessor has identified two market areas. Market Area 1 is the larger area and is the south and northeast parts of the county. Market Area 2 is in the northwest part of the county and is more sandy soils. Land use was completed in 2022.

Costing tables are dated 2021 and depreciation tables are dated 2022 for agricultural homes and outbuildings. The required six-year inspection and review cycle is current. All agricultural homes and outbuildings were inspected in 2021 and 2022. Agricultural homes are valued using the same process as rural residential homes.

Description of Analysis

The statistical sample for the agricultural class includes 43 qualified sales. The median is within the acceptable range while the mean and weighted mean are low. The qualitative statistics are acceptable for the agricultural land class. Reviewing the 80% Majority Land Use (MLU) the irrigated land, dryland and grassland all have medians within the acceptable range. When reviewing the irrigated land, dryland and grassland in all areas compared to the surrounding counties indicates that the Boone County values are comparable with surrounding counties.

Review of the 2023 County Abstract of Assessment for Real Property, Form 45 Compared with the 2022 Certificate of Taxes Levied Report (CTL) reflect the reported adjustments to agricultural land.

Equalization and Quality of Assessment

For 2023 rural residential homes were given an increase on homes that was not applied to agricultural homes, however the increase was only applied to rural residential properties built during narrow time periods. Overall, agricultural properties are being valued using the same

2023 Agricultural Correlation for Boone County

process that rural residential homes are valued using and are equalized at a uniform portion of market value.

Agricultural land values are equalized at uniform portions of market value; all values have been determined to be acceptable and are reasonably comparable to adjoining counties. The quality of assessment of agricultural land in Boone County complies with generally accepted mass appraisal techniques

| RANGE | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |
|-----------|-------|--------|-------|----------|-------|--------|
| Irrigated | | | | | | |
| County | 21 | 70.62 | 65.79 | 60.53 | 16.91 | 108.69 |
| 1 | 21 | 70.62 | 65.79 | 60.53 | 16.91 | 108.69 |
| Dry | | | | | | |
| County | 12 | 71.46 | 70.07 | 68.45 | 09.28 | 102.37 |
| 1 | 12 | 71.46 | 70.07 | 68.45 | 09.28 | 102.37 |
| Grass | | | | | | |
| County | 3 | 70.20 | 66.61 | 64.60 | 08.62 | 103.11 |
| 1 | 2 | 62.97 | 62.97 | 61.21 | 11.48 | 102.88 |
| 2 | 1 | 73.90 | 73.90 | 73.90 | 00.00 | 100.00 |
| ALL | 43 | 70.00 | 65.14 | 61.27 | 15.49 | 106.32 |

Level of Value

Based on analysis of all available information, the level of value of agricultural land in Boone County is 70%.

2023 Opinions of the Property Tax Administrator for Boone County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. § 77-5027 (R.R.S. 2011). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within these Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

| Class | Level of Value | Quality of Assessment | Non-binding recommendation |
|------------------------------|----------------|---|----------------------------|
| Residential Real Property | 95 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |
| Commercial Real Property | 99 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |
| Agricultural Land | 70 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |

BOONE COUNTY 3 YEAR PLAN OF ASSESSMENT

Residential

2023

Update all residential parcels to 2021 M&S costing.

Complete lot value studies for all residential parcels.

Complete pickup work for new construction and demolition and enter information into CAMA.

Review sales and statistical analysis to determine if value adjustments need to be made to residential parcels.

2024

Conduct a complete reappraisal of Petersburg & St Edward parcels and enter information into CAMA.

Complete pickup work for new construction and demolition and enter information into CAMA.

Review sales and statistical analysis to determine if value adjustments need to be made to residential parcels.

2025

Conduct a complete reappraisal of Acreage and Rural Village parcels and enter information into CAMA.

Complete pickup work for new construction and demolition and enter information into CAMA.

Review sales and statistical analysis to determine if value adjustments need to be made to residential parcels.

Commercial

2023

Conduct a complete reappraisal of all commercial parcels and enter information into CAMA.

Complete lot value studies for all commercial parcels.

Complete pickup work for new construction and demolition and enter information into CAMA.

Review sales and statistical analysis to determine if value adjustments need to be made to commercial parcels.

2024

Complete pickup work for new construction and demolition and enter information into CAMA.

Review sales and statistical analysis to determine if value adjustments need to be made to commercial parcels.

2025

Complete pickup work for new construction and demolition and enter information into CAMA.

Review sales and statistical analysis to determine if value adjustments need to be made to commercial parcels.

Agricultural

2023

Conduct a complete reappraisal of the hog confinement parcels and enter information into CAMA.

Complete pickup work for new construction and demolition and enter information into CAMA.

Review ag land sales reports for any changes in land use and update as indicated.

Review sales and statistical analysis to determine if any adjustments are needed to maintain compliance with state requirements.

2024

Review ag land use throughout the county.

Complete pickup work for new construction and demolition and enter information into CAMA.

Review ag land sales reports for any changes in land use and update as indicated.

Land use updates will be monitored using sales reports, GIS, FSA, NRD records, Agri Data, Google Earth and property inspections if necessary.

Review sales and statistical analysis to determine if any adjustments are needed to maintain compliance with state requirements.

2025

Complete pickup work for new construction and demolition and enter information into CAMA.

Review ag land sales reports for any changes in land use and update as indicated.

Land use updates will be monitored using sales reports, GIS, FSA, NRD records, Agri Data, Google Earth and property inspections if necessary.

Review sales and statistical analysis to determine if any adjustments are needed to maintain compliance with state requirements.
