

2023 REPORTS AND OPINIONS OF THE PROPERTY TAX ADMINISTRATOR

DUNDY COUNTY

April 7, 2023

Commissioner Keetle:

The Property Tax Administrator has compiled the 2023 Reports and Opinions of the Property Tax Administrator for Dundy County pursuant to Neb. Rev. Stat. § 77-5027. This Report and Opinion will inform the Tax Equalization and Review Commission of the level of value and quality of assessment for real property in Dundy County.

The information contained within the County Reports of the Appendices was provided by the county assessor pursuant to Neb. Rev. Stat. § 77-1514.

For the Tax Commissioner

Sincerely,

Ruth A. Sorensen

Property Tax Administrator

Kuth a. Sorensen

Introduction

Pursuant to Neb. Rev. Stat. § 77-5027 the Property Tax Administrator (PTA) shall annually prepare and deliver to each county assessor and to the Tax Equalization and Review Commission (Commission) the Reports and Opinions (R&O). The R&O contains statistical and narrative reports informing the Commission of the certified opinion of the PTA regarding the level of value and the quality of assessment of the classes and subclasses of real property in each county. In addition, the PTA may make nonbinding recommendations for class or subclass adjustments to be considered by the Commission.

The statistical and narrative reports in the R&O provide an analysis of the assessment process implemented by each county to reach the levels of value and quality of assessment required by Nebraska law. The PTA's opinion of the level of value and quality of assessment in each county, is a conclusion based upon all the data provided by the county assessor and information gathered by the Nebraska Department of Revenue, Property Assessment Division (Division) regarding the assessment activities in the county during the preceding year.

The statistical reports are developed using the statewide sales file that contains all transactions as required by Neb. Rev. Stat. § 77-1327. From this state sales file, a statistical analysis comparing assessments to sale prices for arm's-length sales (assessment sales ratio) is prepared. After analyzing all available information to determine that the sales represent the class or subclass of real property being measured, inferences are drawn regarding the level of assessment and quality of assessment of that class or subclass of real property. The statistical reports contained in the R&O are developed based on standards developed by the International Association of Assessing Officers (IAAO).

The analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio studies and the overall quality of assessment in the county. The assessment practices are evaluated in the county to ensure generally accepted mass appraisal techniques are used and that those methods will generally produce uniform and proportionate valuations.

The PTA considers the statistical reports and the analysis of assessment practices when forming conclusions for both the level of value and quality of assessment. The consideration of both the statistical indicators and assessment processes used to develop valuations is necessary to accurately determine the level of value and quality of assessment. Assessment practices that produce a biased sales file will generally produce a biased statistical indicator, which, on its face, would otherwise appear to be valid. Likewise, statistics produced on small, unrepresentative, or otherwise unreliable samples, may indicate issues with assessment uniformity and assessment level – however, a detailed review of the practices and valuation models may suggest otherwise. For these reasons, the detail of the PTA's analysis is presented and contained within the Residential, Commercial, and Agricultural land correlations of the R&O.

Statistical Analysis:

Before relying upon any calculated statistical measures to evaluate the assessment performance of the county assessor, the Division teammates must evaluate whether the statistical sample is both representative of the population and statistically reliable.

A statistically sufficient reliable sample of sales is one in which the features of the sample contain information necessary to compute an estimate of the population. To determine whether the sample of sales is sufficient in size to evaluate the class of real property, measures of reliability are considered, such as the coefficient of dispersion (COD) or the width of the confidence interval. Generally, the broader the qualitative measures, the more sales will be needed to have reliability in the ratio study.

A representative sample is a group of sales from a larger population of parcels, such that statistical indicators calculated from the sample can be expected to reflect the characteristics of the sold and unsold population being studied. The accuracy of statistics as estimators of the population depends on the degree to which the sample represents the population.

Since multiple factors affect whether a sample is statistically sufficient, reliable, and representative, single test thresholds cannot be used to make determinations regarding sample reliability or representativeness.

For the analysis in determining a point estimate of the level of value, the PTA considers three measures as indicators of the central tendency of assessment: the median ratio, weighted mean ratio, and mean ratio. The use and reliability of each measure is based on inherent strengths and weaknesses which are the quantity and quality of the information from which it was calculated and the defined scope of the analysis.

The median ratio is considered the most appropriate statistical measure to determine a level of value for direct equalization, which is the process of adjusting the values of classes or subclasses of property in response to an unacceptable required level of value. Since the median ratio is considered neutral in relationship to either assessed value or selling price, adjusting the class or subclass of properties based upon the median measure will not change the relationships between assessed value and level of value already present in the class of property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers, which can skew the outcome in the other measures.

The weighted mean ratio best reflects a comparison of the fully assessable valuation of a jurisdiction, by measuring the total assessed values against the total of selling prices. The weighted mean ratio can be heavily influenced by sales of large-dollar property with extreme ratios.

The mean ratio is used as a basis for other statistical calculations, such as the Price Related Differential (PRD) and Coefficient of Variation (COV). As a simple average of the ratios, the mean ratio has limited application in the analysis of the level of value because it assumes a normal

distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

The quality of assessment relies in part on statistical indicators as well. If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the mean ratio, it may be an indication of disproportionate assessments. Assessments are disproportionate when properties within a class are assessed at noticeably different levels of market value. The coefficient produced by this calculation is referred to as the PRD and measures the assessment level of lower-priced properties relative to the assessment level of higher-priced properties. The PRD range stated in IAAO standards is 98% to 103%. A perfect match in assessment level between the low-dollar properties and high-dollar properties indicates a PRD of 100%. The reason for the extended range on the high end is the recognition by IAAO of the inherent bias in assessment. The IAAO Standard on Ratio Studies notes that the PRD is sensitive to sales with higher prices even if the ratio on higher priced sales do not appear unusual relative to other sales, and that small samples, samples with high dispersion, or extreme ratios may not provide an accurate indication of assessment regressivity or progressivity, appraisal biases that occur when high-value properties are appraised higher or lower than low-value properties in relation to market values.

The Coefficient of Dispersion (COD) is a measure also used in the evaluation of assessment quality. The COD measures the average absolute deviation calculated about the median and is expressed as a percentage of the median. A COD of 15% indicates that half of the assessment ratios are expected to fall within 15% of the median. The closer the ratios are grouped around the median the more equitable the property assessments tend to be.

Nebraska law does not provide for a range of acceptability for the COD or PRD; however, the IAAO Standard on Ratio Studies establishes the following range of acceptability for the COD:

| General Property Class | Jurisdiction Size/Profile/Market Activity | COD Range |
|--|---|-------------|
| Residential improved (single family | Very large jurisdictions/densely populated/newer properties/active markets | 5.0 to 10.0 |
| dwellings, condominiums, manuf. | Large to mid-sized jurisdictions/older & newer properties/less active markets | 5.0 to 15.0 |
| housing, 2-4 family units) | Rural or small jurisdictions/older properties/depressed market areas | 5.0 to 20.0 |
| | Very large jurisdictions/densely populated/newer properties/active markets | 5.0 to 15.0 |
| Income-producing properties (commercial, | Large to mid-sized jurisdictions/older & newer properties/less active markets | 5.0 to 20.0 |
| industrial, apartments,) | Rural or small jurisdictions/older properties/depressed market areas | 5.0 to 25.0 |
| | Very large jurisdictions/rapid development/active markets | 5.0 to 15.0 |
| Residential vacant land | Large to mid-sized jurisdictions/slower development/less active markets | 5.0 to 20.0 |
| | Rural or small jurisdictions/little development/depressed markets | 5.0 to 25.0 |
| | Very large jurisdictions/rapid development/active markets | 5.0 to 20.0 |
| Other (non-agricultural) vacant land | Large to mid-sized jurisdictions/slower development/less active markets | 5.0 to 25.0 |
| | Rural or small jurisdictions/little development/depressed markets | 5.0 to 30.0 |

A COD under 5% indicates that the properties in the sample are either unusually homogenous, or possibly indicative of a non-representative sample due to the selective reappraisal of sold parcels. The IAAO utilizes varying upper bounds for the COD range to recognize that sample size, property type, variation of property ages and market conditions directly impact the COD. This chart and the analyses of factors impacting the COD are considered to determine whether the calculated COD is within an acceptable range. The reliability of the COD can also be directly affected by extreme ratios.

The confidence interval is another measure used to evaluate the reliability of the statistical indicators. The PTA primarily relies upon the median confidence interval, although the mean and weighted mean confidence intervals are calculated as well. While there are no formal standards regarding the acceptable width of such measure, the range established is often useful in determining the range in which the true level of value is expected to exist. Pursuant to Neb. Rev. Stat. §77-5023, the acceptable range is 69% to 75% of actual value for agricultural land, except for taxes levied to pay school bonds passed after January 12, 2022 for which the acceptable range is 44% to 50% of actual value. For all other classes of real property, the acceptable range is 92% to 100% of actual value.

Analysis of Assessment Practices:

A review of the assessment practices that ultimately affect the valuation of real property in each county is completed. This review is done to ensure the reliability of the statistical analysis and to ensure generally accepted mass appraisal techniques are used to establish uniform and proportionate valuations. The review of assessment practices is based on information provided by the county assessors in Assessment Surveys and Assessed Value Updates (AVU), along with observed assessment practices in the county.

To ensure county assessors are submitting all Real Estate Transfer Statements, required for the development of the state sales file pursuant to Neb. Rev. Stat. §77-1327, a random sample from the county registers of deeds' records is audited to confirm that the required sales have been submitted and reflect accurate information. The timeliness of the submission is also reviewed to ensure the sales file allows analysis of up-to-date information. The sales verification and qualification procedures used by the county assessors are reviewed to ensure that sales are properly considered arm's-length transactions unless determined to be otherwise through the verification process. Proper sales verification practices ensure the statistical analysis is based on an unbiased sample of sales.

Comparison of valuation changes on sold and unsold properties is conducted to ensure that there is no bias in the assessment of sold parcels and that the sales file adequately represents the population of parcels in the county.

Valuation groups and market areas are also examined to identify whether the groups and areas being measured truly represent economic areas within the county. The measurement of economic areas is the method by which the PTA ensures intra-county equalization exists. The progress of the county assessor's six-year inspection and review cycle is documented to ensure compliance with Neb. Rev. Stat. \sigma 77-1311.03 and also to confirm that all property is being uniformly listed and described for valuation purposes.

Valuation methodologies developed by the county assessor are reviewed for both appraisal logic and to ensure compliance with generally accepted mass appraisal techniques. Methods and sales used to develop lot values, agricultural outbuildings, and agricultural site values are also reviewed to ensure the land component of the valuation process is based on the local market and economic area.

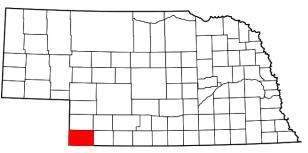

Compliance with statutory reporting requirements is also a component of the assessment practices review. Late, incomplete, or excessive errors in statutory reports can be problematic for property owners, county officials, the Division, the Commission, and others. The late, incomplete, or excessive errors in statutory reporting highlights potential issues in other areas of the assessment process. Public trust in the assessment process demands transparency, and assessment practices are reviewed to ensure taxpayers are served with such transparency.

Comprehensive review of assessment practices in each county is conducted throughout the year. When practical, if potential issues are identified, they are presented to the county assessor for clarification and correction, if necessary. The county assessor can then work to implement corrective measures prior to establishing assessed values. The PTA's conclusion that assessment quality either meets or does not meet generally accepted mass appraisal techniques is based on the totality of the assessment practices in the county.

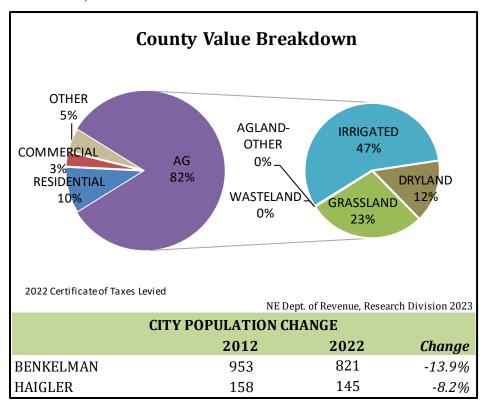

*Further information may be found in Exhibit 94

County Overview

With a total area of 920 square miles, Dundy County has 1,635 residents, per the Census Bureau Quick Facts for 2021, reflecting an overall population decline from the 2020 U.S. Census of 1%. Reports indicate that 78% of county residents are homeowners and 86% of residents occupy the same residence as in the prior year (Census Quick

Facts). The average home value is \$71,988 (2021 Average Residential Value, Neb. Rev. Stat. § 77-3506.02).

The majority of the commercial properties in Dundy County are located in and around the county seat of Benkelman. According to the latest information available from the U.S. Census Bureau, there are 54 employer establishments with total employment of 341, a 2% decrease 2019.

Agricultural land is largest contributor to the valuation base of

Dundy County. Grassland and irrigated land make up a majority of the land in the county. Dundy County is included in the Upper Republican Natural Resources District (NRD).

2023 Residential Correlation for Dundy County

Assessment Actions

All residential properties were reviewed for quality and condition, residential cost tables were updated to June 2022, depreciation tables were updated using sales in the study period. The first 7,000 square feet of all lots were increased by \$2,100 and the first acre for rural residential was increased to \$20,000. All exempt properties were reviewed in 2022 and are now valued using the Computer-Assisted Mass Appraisal (CAMA) System.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

The county assessor qualifies approximately half of the sales to be used for measurement, which is in line with the state average for residential sales. Review of both qualified and non-qualified sales rosters indicated there was no apparent bias in the qualification determination by the county assessor.

Residential property in Dundy County is divided into three valuation groups based on economic differences. Benkelman is the county seat and has the most economic activity. Haigler is a small village and Max, and Parks are unincorporated; this valuation group uses the Benkelman depreciation table with a 20% economic to account for the lower market demand. Rural residential properties have a strong market throughout Nebraska.

The depreciation tables for the entire residential class were updated in 2023, with all stick-built homes on the same depreciation table and another table for manufactured homes. New costing was applied as well. Land values for the entire class were also adjusted. The county meets the six-year inspection requirement; all residential properties have been physically inspected since 2019. The Dundy County Assessor has a written Valuation Methodology, which has been provided to the Property Assessment Division (Division).

Description of Analysis

The county assessor has identified three valuation groups for residential properties in Dundy County.

| Valuation Group | Description |
|-----------------|------------------------|
| 1 | Benkelman |
| 2 | Haigler, Max and Parks |
| 3 | Rural Residential |

Two of the measures of central tendency are within the acceptable range. The COD and PRD are both above the IAAO recommended range. Further analysis reveals that both the COD and the

2023 Residential Correlation for Dundy County

PRD greatly improve with the hypothetical removal of a low dollar sale. However, the sale price substratum range indicates that there is not an organized regressive pattern of assessment. When stratified by valuation group, the majority of sales occur in the Valuation Group 1 and both the median and the weighted mean are within the acceptable range.

Valuation Groups 2 and 3 each have few sales, so the statistics cannot be used to determine equalization of the properties in those areas. Valuation Group 3, although there were few sales had a land valuation increase this year to bring properties to market value.

Valuation Group 2 has low measures of central tendency. This valuation group has increased consistently with Valuation Group 1 over time and received an increase to residential lot values this year. A substat of Valuation Groups 2 is included in this report. Sales from Valuation Group 2 has a wide dispersion of sales ratios. When stratified by sales price, over half of the sales fall into the \$30,000-\$59,999 range with those sales in the acceptable range, suggesting that a further adjustment to this small statistical sample would not improve assessment uniformity.

The statistical sample and 2023 County Abstract of Assessment, Form 45 Compared with the 2022 Certificate of Taxes Levied Report (CTL) indicate that all residential properties changed in a similar manner to the sales. Changes to residential properties reflect the stated assessment actions.

Equalization and Quality of Assessment

Although not every valuation group has enough sales in the study period for statistical analysis, all residential property in Dundy County is subject to the same appraisal techniques as the valuation group which is able to be measured at an acceptable level of value. Thus, all residential property in the county is considered to be equalized. The quality of assessment of residential property complies with generally accepted mass appraisal techniques.

| VALUATION GROUP | | | | | | |
|-----------------|-------|--------|--------|----------|-------|--------|
| RANGE | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |
| 1 | 36 | 99.50 | 111.50 | 97.52 | 24.57 | 114.34 |
| 2 | 7 | 76.19 | 83.13 | 75.96 | 27.46 | 109.44 |
| 3 | 3 | 98.46 | 87.52 | 88.18 | 12.24 | 99.25 |
| ALL | 46 | 98.83 | 105.62 | 94.30 | 24.22 | 112.00 |

Level of Value

Based on analysis of all available information, the level of value for the residential property in Dundy County is 99%.

2023 Commercial Correlation for Dundy County

Assessment Actions

All exempt improved properties were reviewed in 2022. Records were reviewed and updated with correct measurements, style, and condition, which was entered in the Computer-Assisted Mass Appraisal (CAMA) system for valuation. Also, routine maintenance and pick-up work were completed for any new additions or building permits.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

The county assessor qualifies a typical percentage of sales for the commercial class of property and the review of sales qualification procedures indicates that a sales bias is not present. All commercial properties in the county are placed in the same valuation group, which is reflective of the limited local commercial market.

The county assessor meets the six-year inspection and review requirement. Commercial properties were physically reviewed and reappraised in 2021. Lot values, deprecation and costing were all updated at the time of review.

Description of Analysis

With few sales and a recent appraisal, both the median and mean are within the acceptable range for the commercial statistical sample. The COD meets IAAO recommendations, while the PRD is high. One high-dollar sale is significantly impacting the PRD, when removed the PRD drops by 18 points to 104% and the weighted mean would move into the acceptable range at 93%.

Although the sample is small, this class of property was reappraised last year, and both the measures of central tendency and the qualitative statistics support that appraisal uniformity was achieved. The median can be used as the point estimate of the level of values.

A review of the 2023 County Abstract of Assessment for Real Property, Form 45, Compared with the 2021 Certificate of Taxes Levied Report (CTL) shows minimal valuation changes for both sold properties and the general commercial class of property in Dundy County.

Equalization and Quality of Assessment

Review of the statistics and assessment practices demonstrate that they are uniform and equalized. The quality of assessment for the commercial class of real property in Dundy County complies with generally accepted mass appraisal techniques.

2023 Commercial Correlation for Dundy County

Level of Value

Based on analysis of all available information, the level of value for the commercial property in Dundy County is 93%.

2023 Agricultural Correlation for Dundy County

Assessment Actions

The county assessor conducted market analysis of agricultural land sales and grassland values were increased 4%. The assessor reviewed and updated irrigated classifications based on the irrigation status with the local NRD. The agricultural home site acre was increased to \$20,000 this year. Depreciation and costing were updated for agricultural homes.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

Agricultural land sales in Dundy County are qualified at a rate similar to the state average. Examination of the sales qualification process revealed no apparent bias in the qualification determination. All arm's-length sales have been included in the state sales file for measurement of agricultural land property in the county. Only one market area is used as there are no discernable land differences throughout the county.

Agricultural homes are valued the same as rural residential homes, using the updated 2023 depreciation table; costing and home site values were updated this year as well. The county meets the six-year inspection requirement as all agricultural homes and outbuildings were physically inspected in 2020 and land use for the entire county was reviewed using aerial imagery in 2020.

Conservation Resource Program (CRP) acres are valued like grassland. The assessor sent letters to owners who had previously had CRP acres. Owners gave permission for the assessor to request records from the Farm Service Agency (FSA). Conservation Reserve Enhancement Program (CREP) acres are valued like irrigated land. The assessor reviewed NRD records to match acres with the NRD records. There are a couple of Wetland Reserve Program (WRP) parcels, which are valued at 100% of grassland value.

Description of Analysis

The agricultural class of land in Dundy County is within the acceptable range for all three measures of central tendency for the three-year study period. The COD is within the acceptable range, also. When sales are analyzed by 80% Majority Land Use (MLU), all three classes have a median within the acceptable range.

A comparison of the 2023 County Abstract of Assessment for Real Property, Form 45 Compared to the 2022 Certificate of Taxes Levied (CTL) shows the general agricultural population and the sales changed at a similar rate supporting the changes made to grassland values and the irrigated parcel review.

2023 Agricultural Correlation for Dundy County

Equalization and Quality of Assessment

Agricultural land values are equalized at uniform portions of market value; all values have been determined to be acceptable. The quality of assessment of the agricultural land in Dundy County complies with generally accepted mass appraisal techniques.

Agricultural homes and outbuildings are inspected and valued the same as rural residential parcels. Farm home sites and rural residential home sites are valued the same. Agricultural improvements are equalized at the statutorily required level.

| 80%MLU By Market Area | | | | | | |
|-----------------------|-------|--------|-------|----------|-------|--------|
| RANGE | COUNT | MEDIAN | MEAN | WGT.MEAN | COD | PRD |

| 1 | 16 | 74.09 | 73.55 | 71.90 | 14.31 | 102.29 |
| ALL | 54 | 74.03 | 73.69 | 70.02 | 15.83 | 105.24 |

Level of Value

Based on analysis of all available information, the level of value of agricultural land in Dundy County is 74%.

2023 Opinions of the Property Tax Administrator for Dundy County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. § 77-5027 (R.R.S. 2011). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within these Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

| Class | Level of Value | Quality of Assessment | Non-binding recommendation |
|------------------------------|----------------|---|----------------------------|
| Residential Real Property | 99 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |
| Commercial Real Property | 93 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |
| Agricultural Land | 74 | Meets generally accepted mass appraisal techniques. | No recommendation. |
| | | | |

^{**}A level of value displayed as NEI (not enough information) represents a class of property with insufficient information to determine a level of value.

| | MIPS |
| 3. | Personal Property software: |
| | MIPS program and online thru MIPS |
| 4. | Are cadastral maps currently being used? |
| | No |
| 5. | If so, who maintains the Cadastral Maps? |
| | N/A |
| 6. | Does the county have GIS software? |
| | Yes |
| 7. | Is GIS available to the public? If so, what is the web address? |
| | Yes, dundy.gworks.com |
| 8. | Who maintains the GIS software and maps? |
| | gWorks |
| 9. | What type of aerial imagery is used in the cyclical review of properties? |
| | GIS |
| 10. | When was the aerial imagery last updated? |
| | 2020 |

C. Zoning Information

| 1. | Does the county have zoning? |
|----|----------------------------------|
| | Yes |
| 2. | If so, is the zoning countywide? |
| | |
| | Yes |

| 3. | What municipalities in the county are zoned? |
|----|--|
| | Benkelman is zoned. |
| 4. | When was zoning implemented? |
| | 2004 - County, Unknown - Benkelman |

D. Contracted Services

| 1. | Appraisal Services: |
|----|--|
| | Pritchard & Abbott, Inc Operating Minerals |
| 2. | GIS Services: |
| | gWorks |
| 3. | Other services: |
| | none |

E. Appraisal /Listing Services

| 1. | List any outside appraisal or listing services employed by the county for the current assessment year |
|----|---|
| | Yes - Operating Minerals Only |
| 2. | If so, is the appraisal or listing service performed under contract? |
| | Yes |
| 3. | What appraisal certifications or qualifications does the County require? |
| | Appraisal service is recognized as national experts in the field. |
| 4. | Have the existing contracts been approved by the PTA? |
| | Yes |
| 5. | Does the appraisal or listing service providers establish assessed values for the county? |
| | Operating Minerals: Appraisal service sets values. |

2022 DUNDY COUNTY PLAN OF ASSESSMENT

Assessment Years 2023, 2024, 2025

Date: June 15, 2022

Pursuant to Nebr. Laws 2005, LB 263, Section 9, on or before June 15 each year, the assessor shall prepare a plan of assessment, (herein after referred to as the "plan"), which describes the assessment actions planned for the next assessment year and two years thereafter. The plan shall indicate the classes or subclasses of real property that the county assessor plans to examine during the years contained in the plan of assessment. The plan shall describe all the assessment actions necessary to achieve the levels of value and the quality of assessment practices required by law, and the resources necessary to complete those actions. On or before July 31 each year, the assessor shall present the plan to the county board of equalization. The assessor may amend the plan, if necessary, after the budget is approved by the county board. A copy of the plan and any amendments thereto shall be mailed to the Department of Revenue, Property Assessment Division on or before October 31 each year.

Real Property Assessment Requirements: All property in the State of Nebraska is subject to property tax unless expressly exempt by Nebraska Constitution, Article VIII, or is permitted by the constitution and enabling legislation adopted by the legislature. The uniform standard for the assessed value of real property for tax purposes is actual value, which is defined by law as "market value of real property in the ordinary course of trade." Neb. Rev. Stat. 77-112 (Reissue2003).

Assessment levels required for real property are as follows:

- 1) 100% of actual value for all classes of real property excluding agricultural and horticultural land
- 2) 75% of actual value for agricultural land and horticultural land
- 3) 75% of special value for agricultural and horticultural land which meets the qualifications for special valuation under 77-1344

Office Staff

Dundy County Assessor's office staff consist of the assessor and deputy assessor. The Assessor and Deputy Assessor presently hold their State of Nebraska Assessor's certificate and both have attended the mandatory educational classes to maintain their certificate. All certificate holders must obtain 60 hours of approved continuing education within each four year period.

Software/Mapping

Dundy County Assessor's office utilizes the CAMA system provided by MIPS. The Marshall & Swift costing manuals are used to estimate the replacement costs of the residential, commercial and agricultural improvements during the reappraisal process. Dundy County has also implemented a GIS mapping program in 2019.

Assessor's Duties and Responsibilities

❖ Record Maintenance, Mapping, & Ownership Changes - Ownership is updated via real estate transfers Forms 521 and deeds filed of record in the County Clerk/Register of Deeds office. The sales files are then updated and maintained to ensure accurate data for sales studies of the next assessment year. Record maintenance is performed via on-site parcel reviews, GIS and building permits.

Mapping is kept current electronically via GIS. GIS assists with splits and legal description identification.

Administrative Reports
