

2023 REPORTS AND OPINIONS OF THE PROPERTY TAX ADMINISTRATOR

SIOUX COUNTY

April 7, 2023

Commissioner Keetle:

The Property Tax Administrator has compiled the 2023 Reports and Opinions of the Property Tax Administrator for Sioux County pursuant to Neb. Rev. Stat. § 77-5027. This Report and Opinion will inform the Tax Equalization and Review Commission of the level of value and quality of assessment for real property in Sioux County.

The information contained within the County Reports of the Appendices was provided by the county assessor pursuant to Neb. Rev. Stat. § 77-1514.

For the Tax Commissioner

Sincerely,

Ruth A. Sorensen

Property Tax Administrator

Kuth a. Sorensen

Introduction

Pursuant to Neb. Rev. Stat. § 77-5027 the Property Tax Administrator (PTA) shall annually prepare and deliver to each county assessor and to the Tax Equalization and Review Commission (Commission) the Reports and Opinions (R&O). The R&O contains statistical and narrative reports informing the Commission of the certified opinion of the PTA regarding the level of value and the quality of assessment of the classes and subclasses of real property in each county. In addition, the PTA may make nonbinding recommendations for class or subclass adjustments to be considered by the Commission.

The statistical and narrative reports in the R&O provide an analysis of the assessment process implemented by each county to reach the levels of value and quality of assessment required by Nebraska law. The PTA's opinion of the level of value and quality of assessment in each county, is a conclusion based upon all the data provided by the county assessor and information gathered by the Nebraska Department of Revenue, Property Assessment Division (Division) regarding the assessment activities in the county during the preceding year.

The statistical reports are developed using the statewide sales file that contains all transactions as required by Neb. Rev. Stat. § 77-1327. From this state sales file, a statistical analysis comparing assessments to sale prices for arm's-length sales (assessment sales ratio) is prepared. After analyzing all available information to determine that the sales represent the class or subclass of real property being measured, inferences are drawn regarding the level of assessment and quality of assessment of that class or subclass of real property. The statistical reports contained in the R&O are developed based on standards developed by the International Association of Assessing Officers (IAAO).

The analysis of assessment practices in each county is necessary to give proper context to the statistical inferences from the assessment sales ratio studies and the overall quality of assessment in the county. The assessment practices are evaluated in the county to ensure generally accepted mass appraisal techniques are used and that those methods will generally produce uniform and proportionate valuations.

The PTA considers the statistical reports and the analysis of assessment practices when forming conclusions for both the level of value and quality of assessment. The consideration of both the statistical indicators and assessment processes used to develop valuations is necessary to accurately determine the level of value and quality of assessment. Assessment practices that produce a biased sales file will generally produce a biased statistical indicator, which, on its face, would otherwise appear to be valid. Likewise, statistics produced on small, unrepresentative, or otherwise unreliable samples, may indicate issues with assessment uniformity and assessment level – however, a detailed review of the practices and valuation models may suggest otherwise. For these reasons, the detail of the PTA's analysis is presented and contained within the Residential, Commercial, and Agricultural land correlations of the R&O.

Statistical Analysis:

Before relying upon any calculated statistical measures to evaluate the assessment performance of the county assessor, the Division teammates must evaluate whether the statistical sample is both representative of the population and statistically reliable.

A statistically sufficient reliable sample of sales is one in which the features of the sample contain information necessary to compute an estimate of the population. To determine whether the sample of sales is sufficient in size to evaluate the class of real property, measures of reliability are considered, such as the coefficient of dispersion (COD) or the width of the confidence interval. Generally, the broader the qualitative measures, the more sales will be needed to have reliability in the ratio study.

A representative sample is a group of sales from a larger population of parcels, such that statistical indicators calculated from the sample can be expected to reflect the characteristics of the sold and unsold population being studied. The accuracy of statistics as estimators of the population depends on the degree to which the sample represents the population.

Since multiple factors affect whether a sample is statistically sufficient, reliable, and representative, single test thresholds cannot be used to make determinations regarding sample reliability or representativeness.

For the analysis in determining a point estimate of the level of value, the PTA considers three measures as indicators of the central tendency of assessment: the median ratio, weighted mean ratio, and mean ratio. The use and reliability of each measure is based on inherent strengths and weaknesses which are the quantity and quality of the information from which it was calculated and the defined scope of the analysis.

The median ratio is considered the most appropriate statistical measure to determine a level of value for direct equalization, which is the process of adjusting the values of classes or subclasses of property in response to an unacceptable required level of value. Since the median ratio is considered neutral in relationship to either assessed value or selling price, adjusting the class or subclass of properties based upon the median measure will not change the relationships between assessed value and level of value already present in the class of property. Additionally, the median ratio is less influenced by the presence of extreme ratios, commonly called outliers, which can skew the outcome in the other measures.

The weighted mean ratio best reflects a comparison of the fully assessable valuation of a jurisdiction, by measuring the total assessed values against the total of selling prices. The weighted mean ratio can be heavily influenced by sales of large-dollar property with extreme ratios.

The mean ratio is used as a basis for other statistical calculations, such as the Price Related Differential (PRD) and Coefficient of Variation (COV). As a simple average of the ratios, the mean ratio has limited application in the analysis of the level of value because it assumes a normal

distribution of the data set around the mean ratio with each ratio having the same impact on the calculation regardless of the assessed value or the selling price.

The quality of assessment relies in part on statistical indicators as well. If the weighted mean ratio, because of its dollar-weighting feature, is significantly different from the mean ratio, it may be an indication of disproportionate assessments. Assessments are disproportionate when properties within a class are assessed at noticeably different levels of market value. The coefficient produced by this calculation is referred to as the PRD and measures the assessment level of lower-priced properties relative to the assessment level of higher-priced properties. The PRD range stated in IAAO standards is 98% to 103%. A perfect match in assessment level between the low-dollar properties and high-dollar properties indicates a PRD of 100%. The reason for the extended range on the high end is the recognition by IAAO of the inherent bias in assessment. The IAAO Standard on Ratio Studies notes that the PRD is sensitive to sales with higher prices even if the ratio on higher priced sales do not appear unusual relative to other sales, and that small samples, samples with high dispersion, or extreme ratios may not provide an accurate indication of assessment regressivity or progressivity, appraisal biases that occur when high-value properties are appraised higher or lower than low-value properties in relation to market values.

The Coefficient of Dispersion (COD) is a measure also used in the evaluation of assessment quality. The COD measures the average absolute deviation calculated about the median and is expressed as a percentage of the median. A COD of 15% indicates that half of the assessment ratios are expected to fall within 15% of the median. The closer the ratios are grouped around the median the more equitable the property assessments tend to be.

Nebraska law does not provide for a range of acceptability for the COD or PRD; however, the IAAO Standard on Ratio Studies establishes the following range of acceptability for the COD:

General Property Class	Jurisdiction Size/Profile/Market Activity	COD Range
Residential improved (single family	Very large jurisdictions/densely populated/newer properties/active markets	5.0 to 10.0
dwellings, condominiums, manuf.	Large to mid-sized jurisdictions/older & newer properties/less active markets	5.0 to 15.0
housing, 2-4 family units)	Rural or small jurisdictions/older properties/depressed market areas	5.0 to 20.0
	Very large jurisdictions/densely populated/newer properties/active markets	5.0 to 15.0
Income-producing properties (commercial	Large to mid-sized jurisdictions/older & newer properties/less active markets	5.0 to 20.0
industrial, apartments,)	Rural or small jurisdictions/older properties/depressed market areas	5.0 to 25.0
	Very large jurisdictions/rapid development/active markets	5.0 to 15.0
Residential vacant land	Large to mid-sized jurisdictions/slower development/less active markets	5.0 to 20.0
	Rural or small jurisdictions/little development/depressed markets	5.0 to 25.0
	Very large jurisdictions/rapid development/active markets	5.0 to 20.0
Other (non-agricultural) vacant land	Large to mid-sized jurisdictions/slower development/less active markets	5.0 to 25.0
50 (100 1948) (100 10 197) (100 100 100 100 100 100 100 100 100 10	Rural or small jurisdictions/little development/depressed markets	5.0 to 30.0

A COD under 5% indicates that the properties in the sample are either unusually homogenous, or possibly indicative of a non-representative sample due to the selective reappraisal of sold parcels. The IAAO utilizes varying upper bounds for the COD range to recognize that sample size, property type, variation of property ages and market conditions directly impact the COD. This chart and the analyses of factors impacting the COD are considered to determine whether the calculated COD is within an acceptable range. The reliability of the COD can also be directly affected by extreme ratios.

The confidence interval is another measure used to evaluate the reliability of the statistical indicators. The PTA primarily relies upon the median confidence interval, although the mean and weighted mean confidence intervals are calculated as well. While there are no formal standards regarding the acceptable width of such measure, the range established is often useful in determining the range in which the true level of value is expected to exist. Pursuant to Neb. Rev. Stat. §77-5023, the acceptable range is 69% to 75% of actual value for agricultural land, except for taxes levied to pay school bonds passed after January 12, 2022 for which the acceptable range is 44% to 50% of actual value. For all other classes of real property, the acceptable range is 92% to 100% of actual value.

Analysis of Assessment Practices:

A review of the assessment practices that ultimately affect the valuation of real property in each county is completed. This review is done to ensure the reliability of the statistical analysis and to ensure generally accepted mass appraisal techniques are used to establish uniform and proportionate valuations. The review of assessment practices is based on information provided by the county assessors in Assessment Surveys and Assessed Value Updates (AVU), along with observed assessment practices in the county.

To ensure county assessors are submitting all Real Estate Transfer Statements, required for the development of the state sales file pursuant to Neb. Rev. Stat. §77-1327, a random sample from the county registers of deeds' records is audited to confirm that the required sales have been submitted and reflect accurate information. The timeliness of the submission is also reviewed to ensure the sales file allows analysis of up-to-date information. The sales verification and qualification procedures used by the county assessors are reviewed to ensure that sales are properly considered arm's-length transactions unless determined to be otherwise through the verification process. Proper sales verification practices ensure the statistical analysis is based on an unbiased sample of sales.

Comparison of valuation changes on sold and unsold properties is conducted to ensure that there is no bias in the assessment of sold parcels and that the sales file adequately represents the population of parcels in the county.

Valuation groups and market areas are also examined to identify whether the groups and areas being measured truly represent economic areas within the county. The measurement of economic areas is the method by which the PTA ensures intra-county equalization exists. The progress of the county assessor's six-year inspection and review cycle is documented to ensure compliance with Neb. Rev. Stat. \sigma 77-1311.03 and also to confirm that all property is being uniformly listed and described for valuation purposes.

Valuation methodologies developed by the county assessor are reviewed for both appraisal logic and to ensure compliance with generally accepted mass appraisal techniques. Methods and sales used to develop lot values, agricultural outbuildings, and agricultural site values are also reviewed to ensure the land component of the valuation process is based on the local market and economic area.

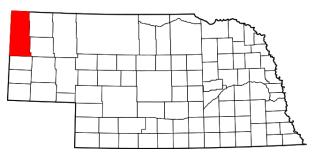

Compliance with statutory reporting requirements is also a component of the assessment practices review. Late, incomplete, or excessive errors in statutory reports can be problematic for property owners, county officials, the Division, the Commission, and others. The late, incomplete, or excessive errors in statutory reporting highlights potential issues in other areas of the assessment process. Public trust in the assessment process demands transparency, and assessment practices are reviewed to ensure taxpayers are served with such transparency.

Comprehensive review of assessment practices in each county is conducted throughout the year. When practical, if potential issues are identified, they are presented to the county assessor for clarification and correction, if necessary. The county assessor can then work to implement corrective measures prior to establishing assessed values. The PTA's conclusion that assessment quality either meets or does not meet generally accepted mass appraisal techniques is based on the totality of the assessment practices in the county.

*Further information may be found in Exhibit 94

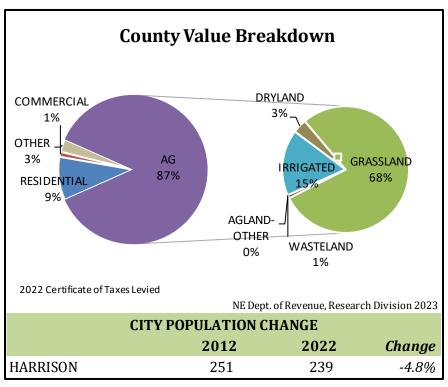

County Overview

With a total area of 2,067 square miles, Sioux County has 1,143 residents, per the Census Bureau Quick Facts for 2021, reflecting an 1% population increase from the 2020 US Census. Reports indicate that 67% of county residents are homeowners and 94% of residents occupy the same residence as in the prior year (Census Quick

Facts). The average home value is \$68,311 (2022 Average Residential Value, Neb. Rev. Stat. § 77-3506.02).

The majority of the commercial properties in Sioux County are evenly disbursed around the county. According to the latest information available from the U.S. Census Bureau, there are 15 employer establishments with total employment of 34, for an 6% increase in total employment.

Agricultural land is the largest contributing factor to the valuation base of the county by an overwhelming majority. Grassland makes up the majority of the land in the county. Sioux is included in both the Upper Niobrara White and North Platte Natural Resource Districts (NRD).

2023 Residential Correlation for Sioux County

Assessment Actions

Assessment actions taken to address the residential property class for assessment year 2023 consisted of only routine appraisal maintenance.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

The process for residential sales qualification and verification begins with a questionnaire mailed to the buyers involved in the sales transaction. If no response is received, the seller is then sent a questionnaire. The county assessor also utilizes knowledge of the county to supplement the qualification process. Sale usability is lower than the statewide average. Upon further review of sales that were deemed non-qualified, each had compelling reasons for disqualification. All arm's-length residential sales were available for current measurement purposes.

Two valuation groups have been established for the residential property class. These are based solely on assessor location. Valuation Group 10 is Harrison, and Valuation Group 80 encompasses the remainder of the county.

The Sioux County Assessor is in compliance with the required six-year inspection and review cycle. The inspection of improvements starts with a comparison of the latest aerial oblique imagery to the property record. An on-site inspection follows if questions arise. The inspection is completed on a township-by-township basis.

The last residential lot study for the village of Harrison was conducted in 2021. The rural home sites were studied in 2022. The cost approach is used exclusively to value residential improvements, and the date of both the cost index and depreciation tables is 2014. Since the residential market in the county is truly not competitive or viable, the county assessor has been able to maintain current values by retaining the older cost and depreciation tables.

The county assessor submitted a valuation methodology in 2020, that is still applicable to the current assessed value.

2023 Residential Correlation for Sioux County

Description of Analysis

Two valuation groups are used in the residential class.

Valuation Group	Description
10	Harrison
80	Rural residential

Analysis of the statistical profile for the residential property class reveals 13 qualified sales that occurred during the sales study period. Two of the three measures of central tendency are within acceptable range. The mean is high and is skewed by one extreme outlier. Its hypothetical removal would bring the mean within acceptable range and reduce the PRD to 104%. The sample is small but, the COD provides support for the median.

A review of sales by valuation group shows 11 sales occurred in Valuation Group 10, and both the median and weighted mean are within acceptable range. Two sales occurred in Valuation Group 80 and are statistically insignificant.

Changes in the sales were found to be less than 1%. Likewise, the 2023 County Abstract of Assessment for Real Property, Form 45 Compared with the 2022 Certificate of Taxes Levied Report (CTL) reveals a similar residential percent change (excluding growth). This matches the assessment actions taken by the county assessor to address the residential property class.

Equalization and Quality of Assessment

A review of the statistical profile and assessment practices of the county indicate that assessment of the residential property class is uniform and proportionate and in compliance with generally accepted mass appraisal techniques.

VALUATION GROUP						
RANGE	COUNT	MEDIAN	MEAN	WGT.MEAN	COD	PRD
10	11	99.68	104.63	94.14	24.31	111.14
80	2	100.13	100.13	99.58	00.90	100.55
ALL	13	99.68	103.94	96.35	20.71	107.88

Level of Value

Based on analysis of all available information, the level of value for the residential property in Sioux County is 100%.

2023 Commercial Correlation for Sioux County

Assessment Actions

The second acre of commercial feedlots was increased from \$1,000 per acre to \$3,000 per acre. Also, routine appraisal maintenance was conducted to address commercial property.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

Review of the sales qualification and verification of commercial property found that there were no non-qualified commercial sales. All commercial sales occurring during the timeframe of the sales study were utilized.

A commercial lot study in Harrison was last conducted in 2010. There is a stagnant commercial market within the village therefore no lot value changes were deemed to be warranted. A rural commercial site study was completed in 2018. Cost and depreciation tables are dated 2014. Since there is not an active or viable commercial market in the county, the county assessor has been able to maintain current values by retaining the older cost and depreciation tables. However, the tables should be updated in the next assessment year.

Commercial property is designated by two valuation groups, Harrison and all remaining commercial property.

The last commercial review for Harrison was in 2015 and is not in compliance with the required six-year inspection and review. A complete commercial review must be conducted to ensure compliance.

Description of Analysis

Analysis of the commercial statistical profile indicates that only two qualified commercial sales occurred during the sales study period. Two sales are an insignificant sample to represent the commercial property in Sioux County. Assessment practices and valuation analysis over time will be utilized to determine commercial equity and uniformity.

A comparison of the Real Property & Growth Valuations Cumulative % Change Chart 2, indicates that 10-year cumulative rate of change for the commercial property is comparable to that of the 10-year residential rate of change, supporting that commercial parcels have been valued at an acceptable market level.

2023 Commercial Correlation for Sioux County

Review of the 2023 County Abstract of Assessment for Real Property, Form 45 Compared with the 2022 Certificate of Taxes Levied Report (CTL) reveals a 7% change to the commercial base excluding growth. This reflects the assessment actions for the current year.

Equalization and Quality of Assessment

As noted in the Assessment Practice Review section, the cost, depreciation and inspections are outdated and need to be reviewed and revalued, there is evidence that values have been adjusted to reflect the local market and therefore the assessment of commercial property in Commercial assessments in Sioux County comply with generally accepted mass appraisal techniques.

Level of Value

Based on analysis of all available information, the level of value for the commercial property in Sioux County is determined to be at the statutory level of 100% of market value.

2023 Agricultural Correlation for Sioux County

Assessment Actions

Assessment actions taken to address the agricultural land class included a review of land use and improvements in Ranges 30 through 35. Aerial obliques were reviewed.

Several increases in land classifications were made after a review of the sales during the study period and a review of market activity. In agricultural Market Area 2, the irrigated land class was raised about 6% overall to closer match the market. Grass was increased between 8-12% based on Land Capability Group (LCG).

The county assessor increased the farm site acre from \$1,000 to \$3,000 per acre to closer match the market and surrounding counties.

Assessment Practice Review

As explained in the Introduction of this Report and Opinion, the assessment practices were reviewed to determine compliance with all assessment requirements and to ensure that all data submitted to the State sales file was timely and accurate.

Sale usability for agricultural land in Sioux County is significantly above the statewide average. For those agricultural sales deemed non-qualified a review indicates that these have adequate information to justify their disqualification. All arm's-length agricultural sales were made available for current measurement purposes.

With the completion of the review of Townships 30 through 35 for the current assessment year, the land use review is current. Improvements on agricultural land are valued using the same cost and depreciation tables from the county assessor's Computer-Assisted Mass Appraisal (CAMA) system as all rural residential improvements. The date of the cost index and depreciation tables are 2014. Since the residential market in the county is relatively inactive, the county assessor has been able to maintain current values by retaining the older cost and depreciation tables.

Two agricultural market areas have been designated to define the unique sale characteristics of agricultural land in Sioux County. The largest portion of the county is designated as agricultural Market Area 1, and it consists primarily of ranching operations. It is comprised of approximately 91% grassland. Agricultural Market Area 2 is in the southwest corner of the county and is comprised of approximately 33% irrigated land and about 59% grassland. The county assessor has not identified any non-agricultural influence in the county, and therefore no special value area has been established.

The last inspection of improvements on agricultural land was conducted in 2020, using 2019 aerial imagery, thus the county assessor is in compliance with the required six-year inspection and review cycle.

2023 Agricultural Correlation for Sioux County

Intensive use land has been identified in Sioux County and is valued at 75% of market value based on a review by a contracted appraisal firm in 2017.

Description of Analysis

Analysis of the agricultural statistical profile indicates 35 qualified sales occurred during the three-year sales study period. The statistical profile indicates two of the three overall measures of central tendency are within acceptable range. The weighted mean is four percentage points below the acceptable range. The COD supports the overall median measure.

Examination of the sales by market area reveals 25 sales in Market Area 1, with both the median and mean measures of central tendency within acceptable range. Ten sales are shown in agricultural Market Area 2 and only the mean is within the acceptable range.

Further breakdown of the sales by 80% Majority Land Use (MLU) by market area indicates both irrigated and grass are in the acceptable range, where sales exist.

Finally, an examination of the 2023 County Abstract of Assessment for Real Property, Form 45 Compared with the 2022 Certificate of Taxes Levied Report (CTL) reflects the stated actions of the county assessor.

Equalization and Quality of Assessment

Improvements on agricultural land are valued using the same cost index and depreciation tables as those used for all rural properties. Agricultural home sites have the same value as rural residential home sites. The quality of assessment of agricultural land in Sioux County is in compliance with generally accepted mass appraisal techniques.

80%MLU By Market Area						
RANGE	COUNT	MEDIAN	MEAN	WGT.MEAN	COD	PRD
Irrigated						
County	7	75.01	75.12	75.22	10.25	99.87
2	7	75.01	75.12	75.22	10.25	99.87
Grass						
County	20	73.30	75.12	68.05	16.63	110.39
1	20	73.30	75.12	68.05	16.63	110.39
ALL	35	72.06	70.68	64.84	17.47	109.01

Level of Value

Based on analysis of all available information, the level of value of agricultural land in Sioux County is 72%.

2023 Opinions of the Property Tax Administrator for Sioux County

My opinions and recommendations are stated as a conclusion based on all of the factors known to me regarding the assessment practices and statistical analysis for this county. See, Neb. Rev. Stat. § 77-5027 (R.R.S. 2011). While the median assessment sales ratio from the Qualified Statistical Reports for each class of real property is considered, my opinion of the level of value for a class of real property may be determined from other evidence contained within these Reports and Opinions of the Property Tax Administrator. My opinion of quality of assessment for a class of real property may be influenced by the assessment practices of the county assessor.

Class	Level of Value	Quality of Assessment	Non-binding recommendation	
Residential Real Property	100	Meets generally accepted mass appraisal techniques.	No recommendation.	
Commercial Real Property	100	Meets generally accepted mass appraisal techniques.	No recommendation.	
Agricultural Land	72	Meets generally accepted mass appraisal techniques.	No recommendation.	

^{**}A level of value displayed as NEI (not enough information) represents a class of property with insufficient information to determine a level of value.

2023 Assessment Survey for Sioux County

A. Staffing and Funding Information

1.	Deputy(ies) on staff:
	One
2.	Appraiser(s) on staff:
	None
3.	Other full-time employees:
	None
4.	Other part-time employees:
	None
5.	Number of shared employees:
	One
6.	Assessor's requested budget for current fiscal year:
	\$167,545
7.	Adopted budget, or granted budget if different from above:
	Same
8.	Amount of the total assessor's budget set aside for appraisal work:
	\$30,000
9.	If appraisal/reappraisal budget is a separate levied fund, what is that amount:
	N/A
10.	Part of the assessor's budget that is dedicated to the computer system:
	\$12,000
11.	Amount of the assessor's budget set aside for education/workshops:
	\$5,800
12.	Amount of last year's assessor's budget not used:
	\$66,758

B. Computer, Automation Information and GIS

1.	Administrative software:
	MIPS
2.	CAMA software:
	MIPS
3.	Personal Property software:
	MIPS
4.	Are cadastral maps currently being used?
	Yes
5.	If so, who maintains the Cadastral Maps?
	The Register of Deeds
6.	Does the county have GIS software?
	Yes
7.	Is GIS available to the public? If so, what is the web address?
	Yes. The web address is https://siouxgworks.com
8.	Who maintains the GIS software and maps?
	gWorks
9.	What type of aerial imagery is used in the cyclical review of properties?
	gWorks
10.	When was the aerial imagery last updated?
	2022

C. Zoning Information

1.	Does the county have zoning?
	Yes
2.	If so, is the zoning countywide?
	Yes

3.	What municipalities in the county are zoned?
	The village of Harrison.
4.	When was zoning implemented?
	2001

D. Contracted Services

1.	Appraisal Services:
	Pritchard & Abbott for mineral interests.
2.	GIS Services:
	gWorks
3.	Other services:
	MIPS for administrative, CAMA and personal property software.

E. Appraisal /Listing Services

1.	List any outside appraisal or listing services employed by the county for the current assessment year
	Pritchard & Abbott.
2.	If so, is the appraisal or listing service performed under contract?
	Yes
3.	What appraisal certifications or qualifications does the County require?
	Certification and expertise in the appraisal of mineral interests.
4.	Have the existing contracts been approved by the PTA?
	Yes.
5.	Does the appraisal or listing service providers establish assessed values for the county?
	Yes, for producing mineral interests.

2023 Residential Assessment Survey for Sioux County

	. Valuation data collection done by:					
	The county assessor.

2023 Agricultural Assessment Survey for Sioux County

1.	Valuation data collection done by:				
	The county assessor.				
2.	List each market area, and describe the location and the specific characteristics that make each unique.				
	Market Description of unique characteristics Area	Year Land Use Completed			
	This agricultural market area consists of the largest portion of the County and is comprised mostly of ranching operations.	2022			
	This market area is located geographically in the extreme southwest corner of Sioux County and primarily consists of about 34% irrigated or crop-producing parcels and about 64% grass land.				
	The county monitors pivot irrigation in Market Area 2 on a yearly basis. Also, a cobliques with the current property record is utilized for improvements on agricultural by range.	-			
3.	Describe the process used to determine and monitor market areas.				
	The County Assessor monitors land use in each market area via gWorks maps and pl and determines the agricultural market boundaries based on use and market data.	nysical inspection,			
4.	Describe the process used to identify rural residential land and recreational lan apart from agricultural land.	nd in the county			
	Primary use of the land is the major consideration that determines the identity and valuation of both rural residential and recreational land distinct from agricultural land within Sioux County. Recreational value is applied by the County to accessory land in parcels where a hunting lodge or cabin is located and/or parcels of land in which the primary purpose of ownership is to provide recreational opportunities.				
5.	Do farm home sites carry the same value as rural residential home site methodology is used to determine market value?	s? If not what			
	Yes.				
6.	What separate market analysis has been conducted where intensive use is county?	identified in the			
	Stanard Appraisal contracted in 2017 to re-value the commercial feedlots in Sioux analysis of feedlot sales in the Panhandle were used to develop a value based on the about \$1000/head) and this included pens, feedbunks, aprons, etc. Land associated w med buildings were valued separately.	head capacity, (at			
7.	If applicable, describe the process used to develop assessed values for parcels Wetland Reserve Program.	enrolled in the			
	There are currently no parcels enrolled in the Wetland Reserve Program.				
7a.	Are any other agricultural subclasses used? If yes, please explain.				
	The county has a timber subclass of grass land.				

	If your county has special value applications, please answer the following
8a.	How many parcels have a special valuation application on file?
	N/A
8b.	What process was used to determine if non-agricultural influences exist in the county?
	N/A
	If your county recognizes a special value, please answer the following
8c.	Describe the non-agricultural influences recognized within the county.
	N/A
8d.	Where is the influenced area located within the county?
	N/A
8e.	Describe in detail how the special values were arrived at in the influenced area(s).
	N/A

2022 Plan of Assessment for Sioux County Nebraska Assessment years 2023, 2024 and 2025 June 15, 2022

To: Sioux County Board of Equalization

Ruth Sorensen, Nebraska Property Tax Administrator

FROM: Michelle Zimmerman, Sioux County Clerk/Ex-Officio Assessor

Pursuant to Neb. Laws 2005, LB 263, Section 9, Sioux County Assessor Michelle Zimmerman hereby presents a Three-year Assessment Plan as follows:

Assessment levels for 2022 are: Agricultural -71%, Residential -100% and Commercial -100%.

For the 2022 County Abstract, Sioux County consists of the following real property types:

• •	Parcels	% of Total Parcels	% of Taxable Value Base
Residential	443	10	3
Commercial	82	2	1
Recreational	7	.001	.004
Agricultural	3938	88	96
Mineral	2	.004	
TOTAL	4472		

Nearly 90% of Sioux County is agricultural land. There are 302 tax exempt parcels. Sioux County had 331 personal property schedules filed on June 1, 2022. There were 44 Homestead exemption applications filed for 2022. For the year 2021, 7 building permits were approved and homes built in the county and added to the Sioux County valuation. For more information see 2022 Reports & Opinions, Abstract and Assessor Survey.

I and two staff members handle all of the personal property returns, we require depreciation schedules be filed with every return and also mailed notices to new property owners in the event that they were not aware of the personal property filing requirement. Staffing has remained the same for 2022, with a full-time deputy and one full-time employee. As Sioux County Clerk/Ex-Officio Assessor, Ex-Officio Clerk of District Court, Election Commissioner, and Zoning Coordinator I cross-train employees to perform other duties that I am also responsible for.

The budget for FY 2021-2022 for Sioux County Assessor was \$162,839.37. Of this budget, \$30,000 was included for contract for reappraisal.

I have completed IAAO Courses 300 and 101, as required by statute. I attend as many Panhandle District Assessor's meetings as possible, as I believe that the networking with other assessors in the area is invaluable. I also have been able to attend the summer workshops offered by NACO in order to gain knowledge and education credits. As

stated previously, I do have a deputy assessor on staff. I will continue to take courses offered through IAAO, NACO and PAD.

Sioux County contracts with GWorks for a web based GIS system. 2019 oblique photos are being used for assessment purposes for review in 2020. We also maintain a cadastral plat map showing ownership. MIPS CAMA programs are used for assessment purposes. Property record cards are maintained by me and my staff. The record owner name and mailing addresses are updated from 521's. Pictures are taken when properties are updated and electronically attached to parcels. Current sketches are also attached electronically.

Ownership on all parcels is updated upon review of 521's filed. Sales data questionnaires are mailed to all purchasers of property listed on 521's on a quarterly basis. I utilize data collected, and am also able to use my personal knowledge on sold properties. Sioux County has county-wide zoning in place and requires building permits for residential construction and improvement information forms for ag construction. The Village of Harrison also requires building permits and I receive a copy of those from the Harrison Village Clerk annually. Property inspections and listing are done by the assessor and staff. I also work very closely with Mark Loose, Field Liaison to prepare and review sales ratio studies.

Market approach to value is used on all properties. Sales comparisons are used to compare similar properties.

Cost approach to value is used on residential and commercial properties. Beginning in 2018, Marshall & Swift costing was updated to 2014 for RCN.

Sioux County contracted with Stanard Appraisals to reappraise all feedlots in the county in 2018. A total of seven feedlots were reappraised by Stanard.

"Notice of Valuation Changes" are sent out prior to June 1. Levels of Value are published in the local newspaper and in the office.

Level of Value, Quality and Uniformity for assessment year 2020:

	Median	COD	PRD
Residential	100	15.76	104.98
Commercial	100	32.55	140.77
Agricultural	71	21.93	101.67

Assessment actions planned for assessment year 2023:

Residential: Monitor costing index to ensure current values are keeping up with market trends. Continue to physically review parcels for changes and monitor building permits issued by the village.

Commercial: Monitor building permits issued by the village. Study sales to ensure that no changes should be made in commercial properties.

Agricultural: Physically inspect properties on which improvement sheets or building permits have been filed. Continue comparison of oblique images of rural improvements. Continue to monitor irrigation pivots in Market Area 2.

Comparison of oblique images of rural improvements-Ranges 30, 31, 32, 33, 34 and 35.

Assessment actions planned for assessment year 2024:

Residential: Monitor costing index to ensure current values are keeping up with market trends. Continue to physically review parcels for changes and monitor building permits issued by the village.

Commercial: Monitor building permits issued by the village. Study sales to ensure that no changes should be made in commercial properties.

Agricultural: Physically inspect properties on which improvement sheets or building permits have been filed. Continue comparison of oblique images of rural improvements. Continue to monitor irrigation pivots in Market Area2.

Comparison of oblique images of rural improvements-Ranges 24, 25, 26, 27, 28 and 29.

Assessment actions planned for assessment year 2025:

Residential: Monitor costing index to ensure current values are keeping up with market trends. Continue to physically review parcels for changes and monitor building permits issued by the village.

Commercial: Monitor building permits issued by the village. Study sales to ensure that no changes should be made in commercial properties.

Agricultural: Physically inspect properties on which improvement sheets or building permits have been filed. Continue comparison of oblique images of rural improvements. Continue to monitor irrigation pivots in Market Area2.

Comparison of oblique images of rural improvements-Ranges 24, 25, 26, 27, 28 and 29.

I, as Sioux County Assessor, will continue to maintain acceptable levels and quality of assessment throughout the county.
